

## CS 255 System Design Document Template

This template lays out all the different sections that you need to complete for Project Two. Each section has guidance to prompt your thinking. You will need to continually reference the interview transcript as you work to make sure that you are addressing your client's needs. There is no required length for the final document. Instead the goal is to complete each section based on what your client's needs are. Remove this note when you are finished, and replace all bracketed text with the relevant information.

### Technical Requirements

**Infrastructure & Hosting:** A cloud-based environment is required to ensure high availability and offload the responsibility for backups and security from the DriverPass staff.

**Software/Platform:** The system must be a web-based application compatible with modern browsers across Windows, macOS, iOS, and Android to support both mobile and desktop access.

**Database:** A relational database is necessary to manage complex relationships between students, 10 cars, drivers, and the three distinct training packages.

**Connectivity:** An API or dedicated web connection to the DMV is required to receive real time notifications regarding rule changes and sample questions.

Security: Implementation of HTTPS/TLS encryption for data transfer and a secure payment gateway for processing credit card information.
